

# Does the Information Technology Sector Hold Greater Gross Margins in Compare to Financials Sector in Year 3 ?

Figure 1

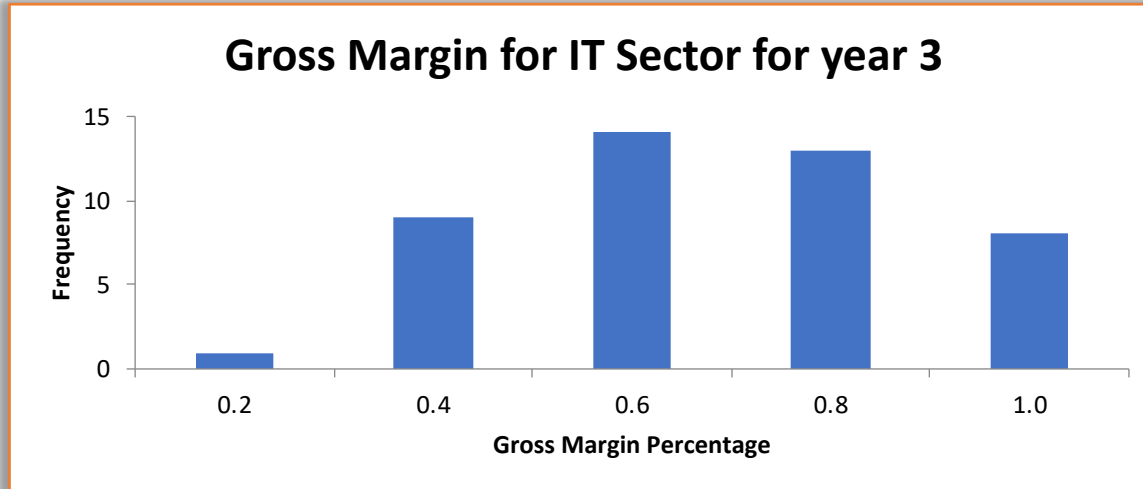

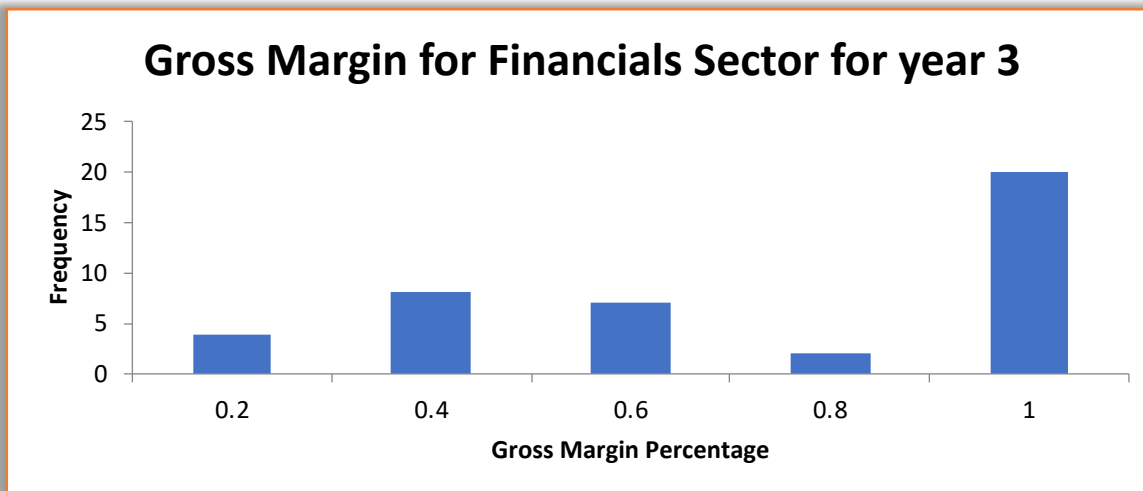

Figure 2

Here are the histograms describing the distributing of IT sector tickers in terms of Gross Margin (figure 1), and Financials sector tickers (figure 2), which are reported in year 3.

The distribution in figure 1 is symmetric which means that the median is close to the mean, while the distribution in figure 2 is left-sekewed, meaning that the mean is lower that the median.

The mean of gross margins for IT sector is 0.56 and the median is 0.57. And the mean of Financials sector is 0.67 while the median is 0.72. Moreover, the standard deviations for IT and Financials sectors are 0.2 and 0.32 respectively. Meaning that the Gross margins of Financials are more spaced out. And the range of Gross Margins for IT sector is 0.81 where the range of Gross Margins of Financials sector is 0.84.

The Financials sector tickers in general holds greater Gross Margins than IT sector which mean that Financial tickers are generating greater space to cover other operating items
